

PAUL SUNNY ISOAGON JR

GoHighLevel (GHL) Automation Specialist — CRM & Marketing Automation

Philippines | techp4ulot@gmail.com | GitHub: github.com/Hexx00r

SUMMARY

GoHighLevel automation specialist helping service businesses turn leads into booked appointments through pipelines, workflows, funnels, and SMS/email follow-up automation. Hands-on experience designing and building a complete end-to-end GHL system covering lead capture, qualification, booking, follow-up, review requests, and pipeline management. Full-stack development background (JavaScript, Python, Java, REST APIs, webhooks) enables custom integrations beyond native GHL features.

GHL CORE SKILLS

- **Workflows & Automation:** lead follow-up sequences, appointment reminders, nurture campaigns, review requests
- **Pipelines & CRM:** pipeline and stage setup, lead qualification, tagging, contact segmentation
- **Funnels & Forms:** landing pages, lead capture forms, surveys
- **Calendars & Booking:** calendar setup, booking and reminder automation
- **Campaigns:** SMS and email automation, lead nurturing
- **Integrations:** webhook handling, REST API connections, Make, third-party tools

HANDS-ON EXPERIENCE

Founder & Automation Builder — DJs Property & Cleaning Services (own business)

Current

Albury–Wodonga, NSW/VIC, Australia

Designing and building the complete GHL automation system for my own property & cleaning services business, covering the full lead-to-job journey:

- Lead capture funnels and forms feeding directly into GHL pipelines
- Automated lead qualification with SMS/email follow-up workflows
- Booking calendar setup with automated appointment reminders
- Post-job review request automation to build social proof
- Pipeline management tracking every lead from first contact to booked job
- Published as an open-source blueprint: *ghl-service-business-automation* (GitHub: Hexx00r)

TECHNICAL SKILLS (SUPPORTING)

- **Backend:** Java (Spring Boot), Python, Node.js
- **Frontend:** JavaScript, React, Next.js, HTML/CSS
- **Integrations:** REST API design, webhook handling, Postman, Make
- **Tools:** Git/GitHub, Notion; AI-assisted development (ChatGPT, Claude, Kimi)

PROJECTS (GITHUB: HEXX00R)

- **ghl-service-business-automation** — production GHL automation blueprint for property, cleaning, and trade service businesses
- **new-api** — REST API design for an e-commerce backend
- **ecommerce-mern** — full-stack e-commerce application (MERN stack)

EDUCATION

Information Technology, Iligan City Computer Institute — Graduated 2014

Ongoing self-study via online courses, official documentation, and project-based learning

LANGUAGES

English — professional written proficiency, conversational spoken (actively improving) | Filipino/Tagalog — native

Open to part-time and project-based GHL assistant work — workflow builds, funnel setup, booking automation, and ongoing CRM management.
